

Revenue Attribution Discrepancy

Question:

Why is the revenue attribution engine reporting a 40% discrepancy vs CRM data?

Category: root-cause-analysis

Difficulty: Advanced

Tags: Analytics, Revenue, Data Quality, Attribution, 5-Whys

Framework / Approach:

1. Data Lineage Mapping
2. 5-Whys
3. Schema Audit
4. Cross-team Alignment

Snapshot / Solution:

Built a data lineage map. Found two event streams using different timestamps (event-time vs ingestion-time). Double-counting occurred in multi-touch attribution for cross-device journeys. Fixed via a de-duplication layer and unified timestamp schema.
